

EcoFeast AI Control Tower — Autonomous Surplus Supply Chains, Zero Waste Value Chains

2. PROBLEM - Manual matching between retail surplus & shelters - Static inventory tools with no live demand signals - Step-by-step manual dispatch, no delegation - Perishable waste from coordination lag	4. SOLUTION - Multi-agent swarm auto-matches surplus to nearby NGOs - Real-time courier routing with live ETA tracking - Automated ESG & tax write-off compliance reporting	3. UNIQUE VALUE PROPOSITION <i>“An AI dispatcher that redistributes surplus food autonomously — matched, routed, and verified in real time, with zero manual coordination.”</i> High-level concept: Uber-style dispatch — but the dispatcher is an AI agent swarm.	9. UNFAIR ADVANTAGE - Working reference implementation proves feasibility today - Deep agentic orchestration (LangGraph) vs. static logistics tools - Dual-tenant, real-time transparency model — hard to replicate quickly	1. CUSTOMER SEGMENTS - Commercial restaurants & cafes - Non-profit shelters & food banks - Corporate CSR / compliance teams - Independent courier fleets
EXISTING ALTERNATIVES - Phone / email coordination between staff - Spreadsheet-based donation logs - Generic surplus-donation apps (manual matching only)	KEY METRICS - Active restaurant & NGO partners - Meals / lbs of surplus redistributed - Avg. match-to-pickup time - Carbon averted (kg CO₂) & tax value generated		CHANNELS - Direct outreach to restaurant chains & food-service groups - Partnerships with food bank / nonprofit networks - CSR & sustainability conferences, ESG consultancies - Local business associations	EARLY ADOPTERS - Independent restaurants with active sustainability goals - Small / mid-size food banks seeking predictable intake schedules
5. COST STRUCTURE - LLM / agent inference (API costs) - Cloud hosting & data infrastructure - Courier / logistics API integrations - Sales & partnership development	6. REVENUE STREAMS - Per-location SaaS subscription for restaurants - Premium ESG reporting tier for corporate CSR teams - Transaction fee per redistribution contract - Courier network licensing
